

KLC Match Recorder — first-run checks

Shared with KFANDRA on 2026-08-24, before the first real match. Web version:

<https://claude.ai/code/artifact/1ccfb4a5-2c37-4acc-9ddf-103e01f1ae90>

Twenty minutes, on a phone. In order — the first step unlocks the rest.

Start here

Season 1 is closed and Season 2 has not been started. Until it is started, the recorder refuses to submit a league match. That is correct behaviour, not a fault, but as a cold open it looks like one.

Before you begin

- Sign in with phone number and PIN as usual.
- Use a **phone**, not a laptop — that is how it will be used on a match day and it is the least-tested part.
- Everything is under **Admin**, which now shows **Match Recorder** and **Seasons**.

1. Start Season 2

Admin → Seasons. Tap **Start** on S2 · KLCFERRSXVSG2 , confirm.

Expect: green "Active season" banner, S2 marked **ACTIVE** , amber note gone.

Only one season can be active; starting one closes any other, with a warning first.

2. Record a friendly

Safe first run — friendlies pay no Kroopies.

Admin → Match Recorder → + New match. **Friendly on**, today's date, Football. Pick a club per side.

Expect: each club's manager appears in slot 1 unprompted.

Add 2–3 more players a side. Tap a player, add a goal or two.

Expect: the KR/MMG figures at the top of the popup change as you tap.

Done → enter scores → **Submit & lock**. There is no Save button; watch for **Autosaved** ✓ .

Expect: every Kroopies figure 0 or − , MMG real, no season tag.

3. Record a league match, and check the maths

The one that matters. As above but **Friendly off**.

Before submitting, write down the expected earnings. Then submit and compare.

Expect: figures agree; match tagged `KLCFERRSXVSG2`.

If the money is wrong: stop, record nothing further, report it.

4. Try to break the lock

Change a stat on the submitted match.

Expect: `This match is locked. Reopen it first.`

Then Reopen (KFANDRA only) → confirm → change something → submit again.

5. Record a combined match

New match, **Combined on**.

Expect: `H1` / `H2` tabs, one half at a time, swap-clubs offer on first opening `H2`. Record in `H1`, switch to `H2` — `H1`'s counts stay put, squad carries across.

Looks wrong, isn't

- **Deep Waters fills no manager** — Seito has no player account yet.
- **Friendly and Combined are fixed at creation** — delete and recreate to change them.
Widening `updateMatchMetaAction` is the fix; not yet done.
- **Kroopies show — on friendlies** — by design, friendlies pay MMG only.

If something's wrong

- **Numbers don't match** — stop, report the match date and the expected figures. The only one worth interrupting for.
- **Match recorded wrongly** — Reopen, fix, re-submit.
- **Won't submit a league match** — check a season is active.
- **Anything else** — screenshot; what was on screen matters most.

Notes for whoever picks this up next

- Verified by 223 unit tests and 13 Playwright e2e tests, plus manual browser runs — all against local Supabase with seeded data. No real match had been recorded against production at the time of writing.
- **Never point `npm run test:e2e` at production.** Its helpers call `resetKlcsraData()`, which deletes every player and match row. It hardcodes `127.0.0.1:54322` for that reason.
- Rollback: `git revert` the app; leave the database alone. The migrations are additive and the previous app does not touch the `klc_*` tables.
