KFANDRA Admin Guide

A guide for KFANDRA staff to the in-app **Admin** section. No technical knowledge needed — you do everything from inside the app.

> Developer tasks (managing players, environment, deployment) live in a separate **Developer Guide** (`developer-guide.md`).

---

1. Who can open it

Only **KFANDRA staff** accounts can open the Admin area. A normal player who tries is sent back to the home screen. If you need staff access, ask the developer to set it once.

2. Getting to the Admin section

When you're signed in as staff, an **Admin** → button appears on the **home screen** (below the MMG / Gym / Diet cards). Tap it — no need to type any web address.

The Admin dashboard has **four cards**: **MMG**, **Gym**, **Diet**, and **Scoring**.

> On every Admin page, the **"Admin"** heading (top-left) takes you back to the Admin dashboard, and **"← Back to app"** (top-right) returns you to the normal app.

3. MMG

Open **MMG** to review session points, two ways:

- **By date** → pick a session. You'll see **every current player** with their **Arrival**, **Confirm**, **Games**, and **Total** points, and a greyed **"not submitted"** marker for anyone missing. The top line shows how many submitted. (KFANDRA is excluded — KFANDRA runs the sessions and doesn't earn points.)
- **By player** → pick a name to see that player's MMG sessions.

> **Total = Arrival + Confirm + Games.** Games is the self-scored part (goals, assists, packing, etc.). Arrival/Confirm are the order-of-arrival and confirmation ladders.
> **How Arrival/Confirm points work — important:** these points depend on **how many players attended** the session. The top value is the number of players who turned up, so a player's order points are **provisional** and **keep changing as more players submit** — they

> are only final once **everyone** who attended has logged their session. (Arriving 1st is worth more when 10 attended than when 5 did.) This is intentional: the app cannot know the order points until it knows the full attendance, which only happens after all submissions are in.

There's also a **"Sync this month to Google Sheet"** button here — see §7.

4. Gym

Open **Gym** (daily logs — not scored, just a record):

- **By date** → pick a day to see everyone who logged gym, with exercise counts and body weight; tap a name to drill in.
- **By player** → pick a name to see every gym entry (exercises, sets/reps, body weight).

5. Diet

Open **Diet** (daily logs — not scored):

- **By date** → pick a day to see everyone who logged diet; tap a name to drill in.
- **By player** → pick a name to see every diet day (meals + the foods logged).
- **Totals** → every day now shows kcal, protein / carbs / fat, how many items were counted, and a red badge for foods marked *watch* or *avoid*. Days before nutrition started show no totals.
- **Team nutrition grid** → players down the side, the last 7 days across. Each cell shows kcal and protein; tap it to open that player's day. Use ← **Week** / **Week** → to move.
- **Food values** → change any food's numbers **per unit** (e.g. one glass of milk), its verdict (good / watch / avoid), its note, or hide it from players. Clear all the numbers to make a food "not counted". **Uncounted only** lists the foods still waiting for values. Changes apply to every day since nutrition started.

6. Scoring

Open **Scoring** to change values yourself (takes effect the next time a score is computed):

- **Game type names** — rename any game type (e.g. "Football short").
- **Point values** — edit any value: game results (win/draw/loss), highlights (goals, assists, saves, cards…), participation bonuses, the order-of-arrival base, and per-game overrides (e.g. Rugby tackle). Type the new number, tap **Save**.

> The **names of highlights** (e.g. "Goals") are still set by the developer for now — you can edit their point *values* here, just not their labels.

7. Google Sheet sync

The app writes a player × session points grid into the club's export sheet — a tab per month (e.g. `Jun 2026`). It syncs **automatically** whenever a player finalizes a session, so you normally don't need to do anything. To force a refresh, use the **"Sync this month to Google Sheet"** button on the **MMG** page.

8. What the developer still handles

Promoting staff, deactivating players, resetting a PIN, adding/removing game types, editing the food/gym catalogues, and highlight *names* are done by the developer (see the **Developer Guide**).

Club Balance Sheets (KLCFERRSXVSG1)

Each club records **one entry per match-day**, edited only by its Player Manager (and KFANDRA). Managers open **Club Balance Sheet** from the home screen, tap their crest, **pick a date** (past dates show that date's figures; today/new dates start blank for input — any date stays editable), and record matches plus a loanee list (add member + number); the app computes that date's Kroopies totals **and a running overview across all dates**. Review every club under **Admin → Club Balance Sheet** — it shows the running overview plus the per-date breakdown — and use **Copy sheet as text** to paste a club's figures to them. Rates live in `app_config` under `klc_rates`. Link managers to their accounts with `supabase/snippets/link-club-managers.sql`.

> **Private — KFANDRA staff only.** Keep this guide and the app internal to KFANDRA.
