

Club Balance Sheet — User Experience

A proposed new feature for the KFANDRA app · For KFANDRA review

This document describes how the new **Club Balance Sheet** would look and feel for everyone who touches it — a player in a club, a club's Player Manager, and KFANDRA/Admin. Nothing here is built yet: this is the plan, written for you to review and approve (or ask for changes) before any work begins.

In one sentence

Each club gets its own private balance sheet inside the app. A club's own members fill it in, the app does all the Kroopies maths automatically, and **only that club and KFANDRA can see it** — so KFANDRA can read every sheet in one place and copy-paste the figures out to each club whenever needed.

Who sees what

Person	What they can do
A player	Opens only their own club's sheet. Can view and edit it.
Other clubs' sheets	Visible as a logo only — locked , no numbers shown.
KFANDRA / Admin	Sees and can edit every club's sheet, all in one place.
This is the core privacy promise: a club's numbers are known only to that club and to KFANDRA . No club can see another club's figures.	

The journey, screen by screen

1. The opening page — a new "Club Balance Sheet" block

When anyone opens the app, alongside the existing MMG, Strength & Conditioning, and Diet blocks there is now a new block:

Club Balance Sheet — Bal. Sheet

Tapping it opens the balance-sheet area.

2. The clubs page — "KLCFERRSXVSG1"

This page is titled **KLCFERRSXVSG1** and shows **all 13 club logos** together, like a wall of crests.

- The player's **own** club is active — tap it to open the sheet.
- The other **12** clubs appear as logos but are **locked** (a small lock icon, no figures shown). Tapping them does nothing.
- KFANDRA/Admin can open any of the 13.

If a player hasn't been assigned to a club yet, every crest is locked and a short note explains they aren't in a club yet.

3. The club page — name, manager, and the sheet

Tapping your club opens its page. At the top:

- The **Club name**
- **Player Manager** — [the manager's name]
- The heading **Club Balance Sheet**

Below that is the sheet itself, as a simple top-to-bottom list.

The Balance Sheet — what you fill in, what the app works out

The sheet is one **running** sheet per club: you keep the same sheet and update it over time (there is no need to start a new one each match). Everything you type **saves automatically** as you go — there is no "submit" button to remember.

You type these in

#	Item	What it is
1	Date	The date the sheet is current as of.
2	Matches played	A number.
3	Matches won	A number.
4	The 13 players	Each player's name is listed with a small box next to it — type a number (e.g. 1, 2, ...) against each.

#	Item	What it is
5	Matches drawn	A number (recorded only).
6	Matches lost	A number (recorded only).
7	Club Bonus from KFANDRA	A number, in Kroopies.

The 13 player names come from the club's roster — the members KFANDRA has assigned to that club — so managers don't have to type names, only the numbers.

The app works these out for you — automatically, in Kroopies

You never calculate these by hand. As soon as you enter the numbers above, these update on screen:

#	Item	How it's worked out
8	Total to be paid to KFANDRA	Matches played $\times$ 10
9	Total to be received by the Club from KFANDRA	(Matches won $\times$ 20) plus the Club Bonus (item 7)
10	Total to be distributed to the loanees	Each player's number $\times$ 10, added up across all 13 players

A worked example. Suppose a club has played 6, won 4, and KFANDRA has given a Club Bonus of 50 Kroopies, and the players' numbers add up to 9:

- **Item 8 — paid to KFANDRA:** $6 \times 10 = 60$ Kroopies
- **Item 9 — received from KFANDRA:** $(4 \times 20) + 50 = 80 + 50 = 130$ Kroopies
- **Item 10 — distributed to loanees:** $9 \times 10 = 90$ Kroopies

If any input changes, these three totals instantly change with it.

The " $\times 10$ ", " $\times 20$ ", " $\times 10$ " rates are settings KFANDRA can adjust later without any app rebuild — they are not baked into the app.

What KFANDRA sees (the Admin view)

Just like the Diet and MMG data you already review, KFANDRA gets a dedicated **Club Balance Sheet** area in the Admin section:

1. A list of all **13 clubs**.
2. Tap a club to see its **full sheet** — every figure (items 1–10) plus each of the 13 players' numbers — laid out cleanly.
3. A "**Copy sheet as text**" button, so you can copy a club's figures in one tap and paste them straight into a message to that club.

This keeps every club's data in one place for KFANDRA, while each club only ever sees its own — exactly the arrangement you asked for.

What we'd need from KFANDRA to finish

To load the real clubs, we'll need:

1. The **13 club names**.
2. Each club's **Player Manager name**.
3. The **13 logo images** (one per club).
4. The **player → club mapping** — which member belongs to which club (this also fills in each club's 13-name roster automatically).

Until those arrive, the feature will be built and demonstrated with 13 placeholder clubs, then the real names, crests and rosters dropped in.

Decisions already agreed (for the record)

- Each **player belongs to one club**; a player can open and edit **only** their own club's sheet.
 - Every club has **one running balance sheet** it keeps updating (not a new one per match).
 - The clubs page is titled exactly **KLCFERRSXVSG1**.
 - **Player Manager** is a name shown at the top of the club's page.
-

Not in this version (noted for later)

- KFANDRA charging a **different loan amount per individual player** — you noted this is for a later email, so it is intentionally left out for now. Today's design handles the club-level figures above cleanly, and per-player loan rates can be added on top later.
-

Prepared for KFANDRA review. Please mark anything you'd like changed and send it back — nothing is built until this is approved.
